University of California, Irvine — Master of Computer Science — GPA: 4.0 [Irvine, CA, USA] Sept 2023 - Dec 2024
Vellore Institute of Technology — B.Tech Computer Science and Engineering [Vellore, India] July 2016 - June 2020

SKILLS

Languages/Scripts	Python, C#, ASP .Net, PowerShell, SQL, HTML, Bash, Java, JavaScript
Security Architecture	Threat Modeling, Attack Surface Analysis, Security Architecture Reviews, Reference Architecture Design, Zero Trust, Secure Design Patterns, API Security, Secrets Management, Encryption, Authentication/Authorization, Pipeline Security, Risk Assessment (NIST, ISO 27001, CSA), MCSB, CIS Benchmarks
Cloud & DevSecOps	Azure, AWS, GCP, Multi-Cloud Security, Serverless (Azure Functions, AWS Lambda), Kubernetes (AKS), Docker, Terraform (IaC), Azure DevOps, Jenkins, CI/CD Pipeline Security, CSPM, CWPP, Microsoft Sentinel, Defender for Cloud, Microsoft Purview
Tools/Libraries	Databricks, Postman, Git, PySpark, OpenCV, Pandas, NLTK, Django, Power BI, Vulnerability Management

EXPERIENCE

Deloitte — Senior Consultant — Cloud Infra and Security Team — Seattle, WA Jan 2025 - Present

- Led security architecture reviews across complex multi-cloud, multi-tenant, and multi-partner environments, evaluating platforms and applications against NIST, ISO 27001, and CSA frameworks, producing formal risk assessments and design reference architectures that drove compliance across 5+ business units
- Developed reusable reference architectures and secure design patterns for identity modernization, external identity onboarding, and AI governance, enabling consistent, repeatable security outcomes across 2,000+ enterprise applications and 120K+ identities and reducing implementation risk by 70%
- Conducted threat modeling and attack surface analysis across API, identity, serverless, and containerized (AKS) attack vectors, acting as security SME for engineering and delivery teams during technical design and integrating security requirements into multi-cloud architectures
- Implemented enterprise-wide AI security governance frameworks, including red-teaming, model guardrails, Agent365, and policy-driven monitoring via Microsoft Purview and Defender for Cloud, enabling compliant AI adoption across 5+ business units and 150K+ users
- Architected and built an MCP server on Azure Kubernetes Service with secrets management (Azure Key Vault), API security controls, and private connectivity, enabling secure Microsoft Graph API operations and reducing identity investigation effort by 60%
- Mentored junior engineers and led cross-functional security working groups across delivery and platform teams, establishing secure-by-default IaC guardrails, CI/CD pipeline patterns, and architecture review standards adopted across production environments

ZS Associates — Associate Consultant Intern — Cloud and Big Data Team — Philadelphia, PA Jun 2024 - Aug 2024

- Performed data security architecture review of a large-scale Databricks and Azure Data Lake environment, identifying access control gaps and attack vectors across 3,000+ Parquet datasets and producing formal risk findings with remediation guidance
- Implemented Unity Catalog in Databricks for unified data governance, applying fine-grained access controls, audit logging, and encryption across Azure Data Lake Storage (ADLS) to enforce least-privilege and compliance requirements
- Designed a hardened custom Docker image for Databricks clusters with pre-vetted, security-approved packages, eliminating runtime installation attack surface and reducing cluster provisioning time by 14%

University of California, Irvine — Data & Tech Fellow — Prof. Tom Andriola — Irvine, CA Jan 2024 - Dec 2024

- Designed and delivered a hybrid identity security architecture with Application Proxy, Entra ID Connect, F5 load balancing, firewall, DNS routing, and HRD policies, producing a formal architecture review and secure design patterns adopted across UCI's enterprise authentication infrastructure
- Conducted threat modeling of the hybrid identity environment, identifying authentication attack vectors including session hijacking, token replay, and lateral movement risks, and translating findings into actionable remediation guidance for platform engineering teams
- Engineered an immersive remote development platform on Apple Vision OS (SwiftUI, SSH, VS Code Server), applying secure-by-design principles across network tunneling, credential management, and sandboxed execution environments

- Built an **Automated M365 and Multi-Cloud Security Assessment Tool** performing **formal risk assessments** of cross-tenant resources and identities against **NIST/CIS frameworks**, producing consistent, documented risk findings and reducing **manual assessment effort by 78%**
- Conducted **security architecture reviews** and provided **consultative guidance** for **PaaS database and Kubernetes cluster** deployments, designing **IAM role structures, RBAC mappings, and identity lifecycle patterns** aligned to least-privilege and Zero Trust principles
- Architected **Zero Trust reference architectures** within Azure, integrating **Entra ID governance, conditional access, encryption, secrets management, and network segmentation** as reusable **secure design patterns** for enterprise adoption
- Led **threat modeling sessions** for Azure-based platforms including a **Video Conferencing Platform** (VMSS, App Service, Cosmos DB) and **Secure SSO System** (Redis Cache, Application Gateway), identifying **authentication, API, and network attack vectors** at each design stage
- Developed an **Azure DevOps extension** to pre-scan **Terraform IaC templates** for **security misconfigurations, attack vectors, and policy violations** before deployment, integrating findings into **Power BI dashboards** for risk tracking and executive reporting
